

Internship Process

M.Sc. Applied Data Science & Artificial Intelligence
Semester 3 – Internship Semester

General Principle

In Semester 3, the internship replaces the regular taught modules.

The internship therefore constitutes:

- A full **30 ECTS academic semester**
- A **competence-based replacement** of the regular modules
- A **supervised, monitored, and graded academic component**

The internship is not merely professional experience.

It is an academic semester requiring structured evaluation and Master-level performance.

Replacement of the regular modules is granted **ONLY if Master-level competences (EQF Level 7)** are demonstrated and formally confirmed.

STEP 1 – Request Mandatory Internship Letter

Before applying to companies, the student must:

1. Request the **Mandatory Internship Letter** (if required by the company).
→ Contact Career Service
→ careerservice.hsg@srh.de
2. Receive the official internship confirmation letter.

This letter confirms that the internship is a compulsory academic component of the ADSAI programme.

STEP 2 – Explore Internship Options

Students are responsible for independently:

- Identifying suitable companies
- Applying for internships (Company-1 ... Company-n)
- Ensuring the internship includes advanced AI / Data Science tasks

Important Notes:

- The internship must include defined technical or analytical responsibilities.
- Purely operational or support tasks are not sufficient.
- Working student jobs are not automatically recognized as internships.
- Internships started without prior academic approval cannot replace modules.

Students should choose internships that allow them to demonstrate:

- Independent system development
- Analytical evaluation
- Architectural thinking
- Critical reflection

STEP 3 – If Internship Is Secured

Once an internship offer is received, the student must ensure the following are available:

- Signed contract
- Defined project scope
- Description of technical responsibilities
- Named company supervisor

The student then proceeds to academic registration.

STEP 4 – Add Internship in CampusWeb

The student must:

- Add the internship in **CampusWeb / Internship Module** **at least 4 weeks before the internship module starts**
- Register officially for the Internship Semester

This action triggers the formal approval workflow.

Failure to register properly may delay recognition.

STEP 5 – First Academic Approval (AcademicFive/Campus Web)

- The approval request is routed via AcademicFive.
- Career Service reviews and confirms formal eligibility.

This step ensures:

- Compliance with university regulations
- Correct semester allocation
- Administrative validity

Only after this approval can the process proceed.

STEP 6 – Second Academic Approval (Module Manager)

- Approval request sent to Module Manager (location-based)
- Module Manager academic suitability

The review checks:

- Technical depth and complexity
- AI/Data Science relevance
- Level of independent responsibility
- Potential to demonstrate Master-level competence
- Alignment with ADSAI learning outcomes

Only after this approval is the internship academically confirmed.

STEP 7 – Enrollment in eCampus

- Student is enrolled in the Internship eCampus Module
- Department shares internship module content and submission guidelines.

The internship now officially replaces the regular semester modules.

STEP 8 – Internship Monitoring (Mandatory)

During the internship:

- Student meets academic supervisor every 6–8 weeks.
- Student submits progress updates.
- Academic supervisor documents monitoring outcome.

Monitoring ensures:

- Master-level competence development
- Independent technical contribution
- Alignment with approved project scope

STEP 9 – Final Submission & Assessment

At the end of the internship:

Student submits:

- Final technical report
- Evidence portfolio
- Company evaluation

Student presents project and completes viva.

Assessment verifies:

- Knowledge
- Technical skills
- Analytical rigor
- System design competence
- Autonomy
- Critical evaluation

STEP 10 – Final Confirmation

After successful evaluation:

- Internship replaces the regular semester modules.
- 30 ECTS are awarded.
- Internship grade is recorded.

If competence standards are not met:

- Additional requirements may be imposed.
- Replacement may be denied.
